MAURICE MWANGI

Software Developer

+254728799975 • mwaslabs@gmail.com • https://ke.linkedin.com/in/maurice-mwas-17a950336 • Ngoigwa, Thika

Summary

I have three years experience on working on this field. I am willing and able to learn new things and how to apply it to the ever evolving market. I am team player and where things are not clear to me I asking, as in return if asked I am ready to help where am able.

In keeping up with ever evolving IT industry there is no time to relax. Hence if am not working on a client's or organizational project, I am working on my own personal project that is Mwas Labs. With upgrading my project I get to learn new methods and how to apply it without the need of risking the project of others

Education

Mount Kenya University
BSc. In Information Technology
2022 - Present

Kiambu Institute of Science and Technology
Diploma
01/2018 - 03/2021

Key Achievements

Maurice's Booking App
This was a project I did in my diploma project and the main idea behind it, was that it could manage as well as keep track of items in an office that had been taken. Once one takes the item they would enter a date they would return then on the date they could get reminded they still possessed the item and needed to return it. It was coded in VB studio

The Bazaar
This is a website of E-commerce that would display the seller's item. The viewer actually could only view the available items nothing much. Coded in pure backend of vanilla PHP and for the front end HTML, CSS and JS

Mwas Labs
My portfolio website that you just viewed. Can send E-mails, has good aesthetic design and done in framework. The main idea of this project was not only to advertise myself but to get a client to request for a website without the need of communication with the developer.

Skills

Web Design · Coding · Video Editing

Certification

ICDL

Projects

MWAS LABS
Location
2024 - Present

This is the portfolio website I build that not only advertises myself as a web/software developer but it also has a questionnaire a client can fill, to request for a web. The project accepts payment for the request. And all along through the development the project a client can monitor their activity. E.g. how much was paid and day's remaining to meet the deadline. The result is a fantastic website that easily connects the clients to the developer in an easy way without the need for external app like whatsapp for communicating. The developer also get to monitor the projects available without missing.
